A turing Legacy: the factory.

 a one hundred trillion dollar company is a fuzzy goals because you can mean it in several different ways:

- « Aim for the moon. If you miss, you may hit a star ». W. Clement Stone

- « Shoot for the moon. Even if you miss, you'll land among the stars. » Norman Vincent Peale

- « Shoot for the stars but if you happen to miss shoot for the moon instead. » Neil Armstrong

- «Shoot for the stars if you miss, with luck you may fall on the moon. »...

choose one, choose yours ?

Some key points to reach this very hard goal.

- free you mind of illusions: exocentric behaviour with a strong cross border community.

- Hyper exponential growth:

  Yellow curve : flat curve with a verical slope (you can see as a long time to collect or build many mechanism parts to potentially build some gigantic (or giant) systems).

- preschool contents specifically made for very young children.

- creativity engine: a friendly welcome space to play with competitors.
How I make money ?

- digital stuff is not for the common sense.
- digital is from pure artificial of mind creation.
- with digital, you have more new powerful potential oportunities every day.

- if you take a simple man, a small company or big company like google. which is the best in race ?

- you can see the thing like that :

  -take a walking man, a man on bicycle, a man in a car and a team on boat.
  -if your goal is flying you have to learn how flying, if you succeed you win but you will never succeed better than the other if you never fix that goal.

- So, you fix new hardest challenges and you build the knowledge to deal with it.
- this mean creating new data and acquiring it. this mean learning.

- a hack is the invention of valuable data . it's the main core of digital business.
- the real question is when you sell it?

- best choice is, not before you will be able to have the utmost amount of customers and you have to learn too how to make that choice.
- Therefore, the choice of how you learn the knowledge is power.

- It could seem to be odd, but we are looking for something where : while you learn, you make money ..

I know this stuff sound crazy.

- Is not about the foolish feeling to wanting strongly to be the rich man.
- but you can't do a start-up without ambition.
- how much you need it to do this particular very hard work ?

- If you want to jump the barrier, you have to overtake it.
- and now the most successful startups have outperform and they fixed the level at one trillion.

- Therefore the purpose of this, it's more about how you manage your work with that focus.
- It isn't building a large hierarchical firm, but it is much more about a place where people are highly committed and work it out at the same one leverage wealth.

- But beware, don't fool yourself.
- Squeezing the risk is not an option .
- Level is rising and half jump is not a good idea.
- It's like crossing a river without taking the risk of wetting the telephone which you will use to call on the other side.
- Easy is silly...

  -how you manage with digital ?
  -factory/appSoft phase 2.
-

To sum up:

- I could try to explain you a very long time but it has no mean if you don't do it.

- put this (hard) challenge in your own project list and see how your emotions evolving ..

- And don't forget you will loose battles but you have not yet loose the war.

first product : softSocialNetwork.

Alpha release :

https://testsite.osc-fr1.scalingo.io/appSoft/pageSqlRandomB.php

- when you struggle, you need sometimes a peaceful digital zone.

Stay tune
